## Chapter 1 Introduction

### Barcode Programming

All user programmable features/options are described along with their programming barcodes or commands in the following sections.

Enter/Exit Setup

\*\* Enable Setup

Exit Setup

Programming Barcode Data

\*\* Do Not Transmit Programming Barcode Data

Transmit Programming Barcode Data

## Factory Defaults

Scanning the following barcode can restore the engine to the factory defaults. You may need to reset your engine when:

1. engine is not properly configured so that it fails to decode barcodes;
2. you forget previous configuration and want to avoid its impact;
3. functions that are rarely used have been enabled for the time being.

**WFFD980**

**Restore All Factory  
Defaults**

## Chapter 2 Scan Mode

### Manual Mode

**Manual Mode** (default): A trigger pull activates a decode session. The decode session continues until the barcode is decoded or the trigger is released or the decode session timeout expires.

W030000

\*\* Manual Mode

**Decode Session Timeout:** This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1s increments from 1s to 255s. The default timeout is 15s. If the parameter is set to 0, the decode session timeout is infinite.

M00031D

Decode Session Timeout

#### Example: Set the decode session timeout to 5s

1. Scan the **Enable Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcode “5”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

## Continuous Mode

**Continuous Mode:** A trigger press activates the engine to scan and decode at user-specified intervals, i.e. the timeout between decodes. Each decode session lasts until barcode is decoded or the decode session timeout expires. To suspend/resume the operation, simply press the trigger. By default, the engine rereads same barcode with no delay.

W030002

Continuous Mode

**Decode Session Timeout:** This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1s increments from 1s to 255s. The default timeout is 15s. If the parameter is set to 0, the decode session timeout is infinite.

M00031D

Decode Session Timeout

### Example: Set the decode session timeout to 5s

1. Scan the **Enable Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcode “5”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

**Timeout between Decodes:** This parameter sets the timeout between decode sessions. When a decode session ends, next session will not happen until the timeout between decodes expires. It is programmable in 0.1s increments from 0.0s to 25.5s. The default timeout is 1.0s.

M00031C

Timeout between Decodes

**Example: Set the timeout between decodes to 5s**

1. Scan the **Enable Setup** barcode.
2. Scan the **Timeout between Decodes** barcode.
3. Scan the numeric barcodes “5” and “0”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

W010F01

Enable Setup

**Reread Delay** sets the time period before the engine can read the same barcode a second time. It protects against accidental rereads of the same barcode. This parameter is programmable in 0.1s increments from 0.1s to 25.5s. The default delay is 3.0s. If the parameter is set to 0, the delay is infinite.

**Note:** This parameter only applies when the **Reread Same Barcode with a Delay** is enabled.

Reread Delay

**Reread Same Barcode with No Delay:** The engine is allowed to reread same barcode, ignoring the reread delay.

**Reread Same Barcode with a Delay:** The engine is not allowed to reread same barcode before the reread delay expires.

To disable rereads of same barcode, enable the **Reread Same Barcode with a Delay** and set the delay to 0.

\*\* Reread Same Barcode with No Delay

Reread Same Barcode with a Delay

**Example: Set the reread delay to  
5s**

1. Scan the **Enable Setup** barcode.
2. Scan the **Reread Delay** barcode.
3. Scan the numeric barcodes “5” and “0”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

W010F00

Exit Setup

W010F01

Enable Setup

## Sense Mode

**Sense Mode:** The engine activates a decode session every time when it detects a change in ambient illumination and meets the requirement of the image stabilization timeout. Decode session continues until barcode is decoded or the decode session timeout expires. A trigger pull can also activate a decode session. By default, the engine rereads same barcode with no delay.

W030003

Sense Mode

**Decode Session Timeout:** This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1s increments from 1s to 255s. The default timeout is 15s. If the parameter is set to 0, the decode session timeout is infinite.

M00031D

Decode Session Timeout

**Example: Set the decode session timeout to 5s**

1. Scan the **Enable Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcode “5”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

13

W010F00

Exit Setup

**Image Stabilization Timeout:** The engine waits for the image stabilization timeout to expire before activating a decode session every time it detects a change in ambient illumination. This parameter is programmable in 0.1s increments from 0.0s to 25.5s. The default timeout is 0.4s.

M00031B

Image Stabilization  
Timeout

**Example: Set the Image Stabilization Timeout to 5s**

1. Scan the **Enable Setup** barcode.
2. Scan the **Image Stabilization Timeout** barcode.
3. Scan the numeric barcodes “5” and “0”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

W010F01

Enable Setup

**Reread Delay** sets the time period before the engine can read the same barcode a second time. It protects against accidental rereads of the same barcode. This parameter is programmable in 0.1s increments from 0.1s to 25.5s. The default delay is 3.0s. If the parameter is set to 0, the delay is infinite.

**Note:** This parameter only applies when the **Reread Same Barcode with a Delay** is enabled.

M00031E

Reread Delay

**Reread Same Barcode with No Delay:** The engine is allowed to reread same barcode, ignoring the reread delay.

**Reread Same Barcode with a Delay:** The engine is not allowed to reread same barcode before the reread delay expires.

To disable rereads of same barcode, enable the **Reread Same Barcode with a Delay** and set the delay to 0.

W100A00

\*\* Reread Same Barcode with No Delay

W100A10

Reread Same Barcode with a Delay

### Example: Set the reread delay to 5s

1. Scan the **Enable Setup** barcode.
2. Scan the **Reread Delay** barcode.
3. Scan the numeric barcodes “5” and “0”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

W010F00

Exit Setup

W010F01

Enable Setup

**Sensitivity:** This parameter specifies the degree of acuteness of the engine's response to changes in ambient illumination. The higher the sensitivity, the lower requirement in illumination change to trigger the engine. You can select an appropriate degree of sensitivity that fits the ambient environment.

WFF0305

High Sensitivity

WFF0310

\*\* Medium Sensitivity

WFF0330

\*\* Medium Sensitivity

M00031A

Custom Sensitivity

Sensitivity levels range from 0 to 255. The smaller the number, the higher the sensitivity.

**Example: Set the sensitivity level to 10**

1. Scan the **Enable Setup** barcode.
2. Scan the **Custom Sensitivity** barcode.
3. Scan the numeric barcodes “1” and “0”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

W010F00

Exit Setup

## Command Trigger Mode

**Command Trigger Mode:** Decode session is activated by a host command. The decode session continues until the barcode is decoded or the decode session timeout expires.

W030001  
Command Trigger Mode

**Decode Session Timeout:** This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1s increments from 1s to 255s. The default timeout is 15s. If the parameter is set to 0, the decode session timeout is infinite.

M00031D  
Decode Session Timeout

### Example: Set the decode session timeout to 5s

1. Scan the **Enable Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcode “5”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Exit Setup** barcode.

---

## Chapter 4 Communication Settings

The engine provides an TTL-232 interface and a USB interface to communicate with the host device. The host device can receive scanned data and send commands to control the engine or to access/alter the configuration information of the engine via the TTL-232 or USB interface.

W010F00

Exit Setup

W010F01

Enable Setup

## TTL-232 Interface

### Baud Rate

When the engine is connected to a host device through its TTL-232 interface, you need to set communication parameters (including baud rate) to match the host device.

Baud rate is the number of bits of data transmitted per second. Set the engine's baud rate to match the Host requirements.

W010F00

Exit Setup

W010F01

Enable Setup

## USB Interface

### USB HID-KBW

When enabled, the engine's transmission is simulated as USB keyboard input. It works on a Plug and Play basis and no driver is required.

\*\* USB HID-KBW

W010F00

Exit Setup

### Standard Keyboard

W031A00

\*\* Standard Keyboard

### Emulate ALT+Keypad

When **Emulate ALT+Keypad** is enabled, any ASCII character (0x00 - 0xFF) is sent over the numeric keypad no matter which keyboard type is selected. Since sending a character involves multiple keystroke emulations, this method appears less efficient.

1. ALT Make
2. Enter the number corresponding to the ASCII character on the keypad.
3. ALT Break

W031A03

Emulate ALT+Keypad

**Note:** It is recommended to turn on the Num Lock light on the host when using this feature.

W010F01

Enable Setup

**ASCII Function Key Mapping Table**

ASCII Value ( HEX )	Function Key	ASCII Value ( HEX )	Function Key
00	2	10	P
01	A	11	Q
02	B	12	R
03	C	13	S
04	D	14	T

### Inter-Keystroke Delay

This parameter specifies the delay between emulated keystrokes.

WC01A00

\*\* No Delay

WC01A40

Short Delay (5ms)

WC01A80

Medium Delay (10ms)

WC01AC0

Long Delay (15ms)

W010F00

Exit Setup

W010F01

Enable Setup

### Convert Case

This parameter is valid when the **Standard Keyboard** or **Function Key Mapping** is enabled.

W381A00

\*\* No Case Conversion

W381A20

Convert All to Upper Case

W381A30

Convert All to Lower Case

W381A08

Invert Upper and Lower Case Characters

**Example:** When the **Invert Upper and Lower Case Characters** feature is enabled, barcode data “AbC” is transmitted as “aBc”.

W010F00

Exit Setup

W010F01

Enable Setup

### Emulate Numeric Keypad

When this feature is disabled, sending barcode data is emulated as keystroke(s) on main keyboard.

To enable this feature, scan the **Emulate Numeric Keypad** barcode. Sending a number (0-9) is emulated as keystroke on numeric keypad, whereas sending other character like “+”, “\_”, “\*” , “/” and “.” is still emulated as keystroke on main keyboard. However, this feature is influenced by the state of the Num Lock key on the host: if the Num Lock light on the host is ON, numbers are sent over numeric keypad, if it is OFF, numbers are sent over main keyboard.

W041A04

Emulate Numeric Keypad

W041A00

\*\* Do Not Emulate Numeric Keypad

**Note:** Make sure the Num Lock light of the Host is turned ON when using this feature.

**Emulate ALT+Keypad ON** prevails over **Emulate Numeric Keypad**.

W010F00

Exit Setup

## USB DataPipe

A driver is required when using this protocol to communicate with the engine.

USB DataPipe

## USB COM Port Emulation

This feature allows the host to receive data in the way as a serial port does. However, you need to set communication parameters on the engine to match the Host requirements. A driver is required for this feature.

USB COM Port  
Emulation

W010F01

Enable Setup

## HID-POS

The HID-POS interface is recommended for new application programs. It can send up to 56 characters in a single USB report and appears more efficient than USB HID-KBW.

Features:

- ✧ HID based, no custom driver required.
- ✧ Way more efficient in communication than USB HID-KBW and traditional RS-232 interface.

**Note:** HID-POS does not require a custom driver. However, a HID interface on Windows 98 does. All HID interfaces employ standard driver provided by the operating system. Use defaults when installing the driver.

W070903

HID-POS

W010F00

Exit Setup

## Access the Engine with Your Program

1. Use Create File to access the engine as a HID device.
2. Use Read File to deliver the scanned data to the application program.
3. Use Write File to send data to the engine.

For detailed information about USB and HID interfaces.

## Acquire Scanned Data

After a barcode is decoded, the engine sends an input report as below:

	Bit							
Byte	7	6	5	4	3	2	1	0
0	Report ID = 02							
1	Barcode Length							
2-57	Decoded Data (1-56)							
58-61	Reserved (1-4)							
62	00							
63	00 (no data continued) or 01 (data continued)							

## Chapter 5 Data Formatting

### Introduction

After a successful barcode read, a string containing numbers, letters or symbols will be returned.

In real applications, barcode data may be found insufficient for your needs. You may wish to include additional information such as barcode type, data acquisition time or delimiter in data being scanned.

Adding extra information to printed barcodes does not seem like a sensible solution since that will increase the barcode size and make them inflexible. Instead, we come up with the idea of appending prefix and suffix to the data without making any change to barcodes. We will show you how to conduct the configuration in the following sections.

**Note:** Customized data: <Prefix> <Data><Suffix><Terminating Character>

W010F01

Enable Setup

## Prefix Sequence

W013100

\*\* Code ID+Custom+AIM ID

W013101

Custom+Code ID+ AIM ID

W010F00

Exit Setup

## Custom Prefix

### Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 5 characters.

For example, if barcode data is “123” and custom prefix is “AB”, the host will receive “AB123”.

W043104

Enable Custom Prefix

W043100

\*\* Disable Custom Prefix

### Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired prefix and the **Save** barcode.

**Note:** A custom prefix cannot exceed 5 characters.

M000100

Set Custom Prefix

**Example:** Set the custom prefix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45)

1. Scan the **Enable Setup** barcode.
2. Scan the **Set Custom Prefix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Enable Custom Prefix** barcode.
6. Scan the **Exit Setup** barcode.

W010F01

Enable Setup

## AIM ID Prefix

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the **AIM ID Table** section in Appendix). If AIM ID prefix is enabled, the engine will add the symbology identifier before the scanned data after decoding.

W186018

Enable AIM ID Prefix

W186000

\*\* Disable AIM ID Prefix

## Custom Suffix

### Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 5 characters.

For example, if barcode data is “123” and custom suffix is “AB”, the host will receive “123AB”.

W083108

Enable Custom Suffix

W083100

\*\* Disable Custom Suffix

## Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired suffix and the **Save** barcode.

**Note:** A custom suffix cannot exceed 5 characters.

M000101

Set Custom Suffix

**Example:** Set the custom suffix to “CODE” (its hexadecimal value is 0x43/0x4F/0x44/0x45)

1. Scan the **Enable Setup** barcode.
2. Scan the **Set Custom Suffix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Enable Custom Suffix** barcode.
6. Scan the **Exit Setup** barcode.

## Terminating Character Suffix

A terminating character, such as carriage return (CR) and line feed (LF), can be used to mark the end of data, which means nothing can be added after it.

A terminating character suffix cannot exceed 5 characters.

### Enable/Disable Terminating Character Suffix

This parameter determines whether to append predefined terminating character suffix to the data.

W103110

\*\* Enable Terminating Character Suffix

W103100

W010F01

Enable Setup

## Set Terminating Character Suffix

The engine provides a shortcut for setting the terminating character suffix to **0x0D (CR)** or **0x0D,0x0A (CRLF)** or **0x09 (Horizontal Tab)**, and enabling it by scanning the appropriate barcode below.

Terminating Character 0x0D

WFFD9C4

\*\* Terminating Character 0x0D,0x0A

Terminating Character 0x09

M000102

Set Terminating Character Suffix

To set other terminating character suffix, scan the **Set Terminating Character Suffix** barcode, the numeric barcodes corresponding to the hexadecimal value of a desired terminating character, and the **Save** barcode.

**Note:** A terminating character suffix cannot exceed 5 characters.

### Example: Set the terminating character suffix to 0x0A (LF)

1. Scan the **Enable Setup** barcode.
2. Scan the **Set Terminating Character Suffix** barcode.
3. Scan the numeric barcodes “0” and “A”. (See the **Digit Barcodes** section in Appendix)
4. Scan the **Save** barcode. (See the **Save/Cancel Barcodes** section in Appendix)
5. Scan the **Enable Terminating Character Suffix** barcode.
6. Scan the **Exit Setup** barcode.

W010F00

## Set Length Range for Matrix 2 of 5

The engine can be configured to only decode Matrix 2 of 5 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths.

The supported maximum length is 255 characters. If minimum length is set to be greater than maximum length, the engine only decodes Matrix 2 of 5 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Matrix 2 of 5 barcodes with that length are to be decoded.

M000309

## Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel the Last Digit** barcode and then the correct digit, or scan the **Cancel All Digits** barcode and then the digits you want.

For instance, after reading the **Decode Session Timeout** barcode and numeric barcodes “1”, “2” and “3”, you scan:

**Cancel the Last Digit:** The last digit “3” will be removed.

**Cancel All Digits:** All digits “123” will be removed.
